

A world map illustrating the global distribution of the genus *Euphorbia*. The map uses a two-color scheme: dark green for regions where the genus is present and light green for regions where it is absent. The dark green areas are concentrated in North America (including Alaska, Canada, and the United States), Mexico, Central America, the Caribbean, South America (primarily in the northern and central parts), Europe, North Africa, the Middle East, India, China, and Australia. The light green areas cover most of South America (particularly the southern part), Russia, Siberia, and parts of Africa and Asia. The map also shows the outlines of the continents and major islands.
